PRESIDENT'S MESSAGE

We are rolling right through June; got rain over the weekend, from 2 to 6 inches depending on your location! Very welcome!! We had a rain delay at the Area 6 Golf Outing in Mattoon on June 1, but the 17 or so foursomes got quickly dried out with the afternoon heat.

As far as the Moving Dirt- Digging Holes report, the June 14 -15 ISAP Saturated Buffer Training at ISU Farm will have been completed by the time you read this. Last week Joe Streitmatter, Ryan, Jill from The Wetlands Imitative, Don and I located and got elevations of tile for the Livingston County Constructed Wetland project scheduled for August 13-17. The second ISAP training on Constructed Wetlands will be on July 26 at ICC in East Peoria, followed by a third training session on Bioreactors the 28th and 29th of August at RCC in Decatur. Our Edge of Field Partnership Bioreactor project with Illinois Farm Bureau, NRCS, and University of IL up by Walnut is scheduled for the 21st of August. As you can see from our projects, we are going to be getting the rust off of some dozers and hoes! Our Picnic Committee of Bill Dean and Jon Seevers, along with Lauri and Ryan, have put together the Annual Picnic and Members' Meeting on the 7th of July. Starting out with a plant tour at ADS in Mendota, we will have lunch at Lock 16 Center in LaSalle, ahead of the Members' Meeting, followed by a Canal Boat Ride and Tour at lock 16. Looking forward to that, I hope we have a good turnout.

The 2018 National LICA Summer Meeting is in Grand Rapids, MI on July 10-14th. Marie and I are planning on going; would like to see a nice turn out from the Illinois Chapter.

Eric Layden and the Education Committee are planning a Drainage Workshop at RCC in Decatur on August 9 and 10; more details to come.

As you can see, we have a busy summer ahead. I hope you can join us for some of the fun times and work times.

Be Safe,

Lee

BOARD & MEMBERS' MEETING SCHEDULE

Unless changed by the Board during the year, the ILICA business meetings are scheduled as follows:

July 7, 2018 - Picnic & Members' Meeting: Lock 16 Center, LaSalle

September 8, 2018 - Regular Meeting of the Board:

ILICA Office, Brimfield

Exact location, committee meeting times & other details will be published in the ILICA News and sent to members via mail and/or email.

AG GROUPS SEEK TO HAVE WOTUS DECLARED UNLAWFUL

If the "waters of the United States" rule became law, it would "freeze up" the use of farmland as landowners try to determine "whether every minor drainage ditch, dry arroyo, and nearby puddle is covered by the Clean Water Act," farm groups said in an amicus brief filed in federal court in North Dakota.

The American Farm Bureau Federation filed the brief along with 14 other industry groups, including the National Cattlemen's Beef Association and its associated Public Lands Council, National Corn Growers Association, National Pork Producers Council, and U.S. Poultry & Egg Association.

They joined 14 states asking the court to schedule oral arguments as soon as "practicable" and then declare the 2015 WOTUS rule unlawful. A preliminary injunction issued by the North Dakota court in 2015 remains in place, preventing implementation of WOTUS in 13 states – Alaska, Arizona, Arkansas, Colorado, Idaho, Missouri, Montana, Nebraska, Nevada, New Mexico, North Dakota, South Dakota and Wyoming. (Iowa is separately supporting the states' request as an intervenor.)

EPA and the Army Corps of Engineers have delayed implementation of the rule until 2020, an action that itself is being challenged in separate lawsuits from other states and environmental groups.

In the North Dakota case, EPA and the Army Corps of Engineers, as well as the Sierra Club, which has intervened to defend the rule, must file their briefs by July 16. The court previously rejected the government's attempt to stop the case from being reopened. It had been stayed while the question of where WOTUS cases should be heard was considered by the Supreme Court.

The high court decided that challenges to WOTUS belong in the district courts, not the federal appeals courts, and Chief U.S. District Judge for North Dakota Daniel Hovland ruled May 1 that the case could proceed.

In their brief, the ag groups said that together they "grow virtually every agricultural commodity produced in the United States, including significant portions of the U.S. milk, corn, sugar, egg, pork, and beef supply. Agriculture and agriculturerelated industries contributed \$775.8 billion to the U.S. gross domestic product in 2012, a 4.8 percent share."

The groups reiterated their argument for why the rule should be invalidated: It's "procedurally defective" because the agencies did not properly consider comments and engaged in a "propaganda" campaign aimed at critics; it "reads the term navigable out of the (Clean Water Act) and asserts jurisdiction over remote and isolated features that bear no meaningful relationship to 'navigable waters"; and it is unconstitutional, both because it "disrespects the federalist scheme inherent in the CWA" and because it fails to clearly define what is prohibited, thus giving government agents "unchecked discretion to enforce the law in arbitrary and discriminatory ways."

The brief was filed Friday, the same day that a federal judge in Georgia is expected to rule on a request by 11 states, led by the state of Georgia, to issue a preliminary injunction that would prevent EPA and the Corps from implementing the 2015 rule.

The states in that case, which also include West Virginia and Indiana, fear that if the "applicability rule" delaying WOTUS until 2020 is invalidated, the WOTUS rule would immediately go into effect.

The Farm Bureau and most of the other ag groups also are plaintiffs in another case in Texas, where they are seeking a nationwide injunction of WOTUS. That case has been briefed and argued, but the judge has not issued a decision.

With all the summer field demonstration projects on ILICA's horizon, it only seems fair to keep our very generous associate members in the know and updated.

ILICA currently has two edge of field practices slated for installation. A saturated buffer for ISAP in Lexington, IL and a bioreactor for the Edge of Field Partnership in Walnut, IL. Per Board decision due to small project scope, these projects are contracted at the Association level, but open to members in the immediate area to install on the Association's behalf. Product, machinery, and labor are the responsibility of the contractor selected for the project.

Therefore, the most immediate opportunity will be the TWI Constructed Wetland project in Livingston Co., near Saunemin, IL scheduled for August 13-17. The final design is almost complete for the nearly 1 acre practice.

If you are interested in participating in these building projects or would like more detail about the construction itself, please contact Ryan at the ILICA office at (309) 446-3700 or via email at Ryan@illica.net.

Antique mall merchandise is owned by different sellers -- and each seller arranges her goods in an individual booth. Though they're a lot like permanent indoor flea markets, shopping antique mall sales is a bit different. Read these 12 do's and don'ts before you go:

- 1. **Do** ask about payment terms. Many antique malls accept credit and debit cards, and some even take personal checks. Others only accept cash.
- 2. **Do** ask when vendors typically restock their booths. Some antique malls des-

ignate certain days. Others allow the dealers to restock at their convenience. If the new goods arrive on scheduled days, those are the days you should plan to go. If the vendors decide, visit when

they're most likely to bring in their weekend finds. Antique mall dealers shop estate and yard sales, so many restock their booths on Sunday, or on the first weekday the antique mall opens. Some malls close on Mondays after the weekend rush.

- 3. Do ask about delivery options if you can't load and haul your purchases on your own. Some antique malls have a list of recommended delivery persons. Some individual dealers are even willing to deliver the goods themselves.
- 4. **Don't** assume you can't negotiate price just because the dealers aren't on hand to haggle. Take small items to the front counter and ask for a discount or make an offer. If the piece is too large, write down of the information on the tag. Some dealers make arrangements with the antique mall staff in advance, and they'll give you a certain percentage off just for asking. In other cases, the person working just calls the dealer with your offer.
- 5. **Don't** expect a discount if the price tag says "firm." That means the price is what it is and the dealer won't negotiate.
- 6. Do ask for a discount if the tag doesn't say firm, especially if it shares a booth with tags that do. If the seller took the time to mark certain items as non-negotiable, that likely means they're willing to negotiate on the rest.

- 7. **Do** wear comfortable shoes with low heels. Shopping in antique malls typically means lots of walking. Many are located in older strip malls that once contained supermarkets and department stores. That means the floors are most likely made of concrete, even if they're covered with vinyl tiles.
- 8. **Do** wait a few weeks if the dealer won't come down on a price -- if you're willing to risk losing the piece. If an item hasn't moved after a certain amount of time, you may find the price has been reduced the next time you visit.

9. **Do** make note of booth numbers with stunning merchandise and/or low prices. Make those your first stops on your next visit.

10. Do take a rolling cart and toss in your flea market tool kit. That way you'll have your room measurements, color samples, and floor plans on hand as you shop. Most antique malls don't offer refunds or exchanges.

- For Shopping For Shopping Antique Malls
 - 11. **Do** inspect antique and vintage goods for damage before you buy them. Look for pieces that are sturdy and intact, and make sure they won't cost too much to restore.
 - 12. **Don't** buy lamps or other electrical items without plugging them in for a test, unless you plan on rewiring them anyway. Antique malls are held indoors; you'll find an outlet somewhere.

Illinois Land Improvement Contractors Association Annual Picnic, Members' Meeting, & More July 7th, 2018 I&M Canal Boat & Lock 16 Center 754 First Street, LaSalle, IL 61301

Please join Illinois LICA for our Annual Picnic and Summer Members' Meeting at the I&M Canal Boat & Lock 16 Center in LaSalle, IL. The day will begin with a tour of Advanced Drainage Systems' (ADS) manufacturing plant located in Mendota, IL (1600 Industrial Dr.). After the plant tour, we will head 30 minutes south to the I&M Canal Boat & Lock 16 Center in LaSalle for lunch and the members' meeting. Following the members' meeting, we will relax with a ride on the 76-by-15-foot I&M Canal Boat: a mule-pulled, full-size replica of the 19th Century canal boats that once carried passengers on the I&M Canal, the hand-dug

waterway that opened in 1848, extending from Chicago to LaSalle-Peru. And for the Ladies during the members' meeting, a trip to the expansive 30,000 sq.ft., Peru Antique Mall should have that hard to find item you've been looking for with over 200 quality dealers in-house.

BEYERS & WYSE RECEIVE NATIONAL LICA SCHOLARSHIPS

The National LICA scholarship is eligible to relatives of active LICA Contractors (i.e. spouse, child, grandchild) with an interest in agriculture, construction, engineering, landscaping, law, marine biology, medicine, and more. For the second year in a row, these two young ladies from Illinois again made the cut out of eight total recipients named for 2018: Ashley Beyers and Jessica Wyse.

Ashley Beyers, daughter of member Jason & Heather Beyers (Lanark) and granddaughter of member Tom & Judy Beyers (Odin), was recently named as a National LICA Scholarship winner.

Ashley's career goal is to become a veterinarian of both large and small animals, with aspirations of opening her own veterinary practice in the future.

She plans on obtaining a bachelor's degree from Gannon University and transferring into a veterinarian program, taking roughly eight years to complete. She hopes to graduate college at the top of her class and obtain a Doctor of Veterinary Medicine degree during the process. Ashley recently made the Deans list both semesters at Gannon University and helped advance their volleyball team to the final four in the NCAA Division II tournament; the furthest the team has advanced in school history! Ashley intends to use her scholarship funds to help pay for books and fees, or room and board at Gannon University. The scholarship funds also provide her the opportunity to pursue internships or jobs that will further her educa-

tion, but that don't necessarily pay a salary.

In her spare time, Ashley enjoys horseback riding and is no stranger to farm chores. Already this summer, she has assisted her father in finishing up his planting season by packaging and dumping seed. Later this summer, Ashley intends on taking a service trip with her volleyball program to Costa Rica where they will play the national team and help out the community in various ways.

Jessica Wyse, daughter of Ken and Jenny Wyse (Mackinaw) and granddaughter of member Wayne & Janice Litwiller (Hopedale), was recently named as a National LICA Scholarship winner.

Jessica is an Olympia High School graduate, where she was named Valedictorian in 2017. She will be a sophomore at Olivet Nazarene University, Bourbonnais, IL this fall, where she made the Dean's list both semesters of her freshman year. Jessica participates on the Olivet swim team while pursing a degree in Nursing. Jessica intends on utilizing her scholarship money for tuition.

Jessica's hobbies are photography, reading, swimming, running and biking. And this summer, Jessica will be on staff at Little Eden camp in Onekama, Michigan. She will be a counselor for the youth camps and also working in the kitchen, office, cleaning cabins and performing other jobs as needed during the months of June, July and August.

Please join us in congratulating Ashley, Jessica, and their families for their recent accomplishments. We wish both young ladies the best of luck in their future endeavors!

GOLDFLEX™

flexible dual-wall means faster installs are in your future

- · Installs up to 60% faster than dual-wall sticks
- · Trenchless installation increases safety

DRAINAGE SYSTEM RESPONSE IN ILLINOIS TO FUTURE CLIMATE SCENARIOS

The design of subsurface drainage systems is affected by climatic variables such as temperature and precipitation. An increase in the atmospheric concentration of greenhouse gases is likely to change climatic conditions in the coming decades (IPCC, 2014). A warming trend is projected with temperatures increasing by 5 to 10°F while a 10-30% increase in annual precipitation may occur across the Midwestern United States by the end of the 21st century (Easterling & Karl, 2001; Wuebbles

& Hayhoe, 2004). Since future climatic patterns may affect the amount and timing of drainage water and consequently crop production, this study evaluates the potential impacts of climate change on the design of drainage systems in Illinois. Climate stress adversely impacts agricultural production as it results in a delay of planting spring crops, changes crop growing patterns, and causes extreme events such as droughts or floods.

The climate of Illinois migrates south (UCS, 2009)

The state of Illinois has warmed by about 1°F in the last century (EPA, 2016). In the last few years, there has been a rise in average annual temperature accompanied by heat waves. Dramatically hotter summers are projected for Illinois (Frankson et al., 2017) if anthropogenic emissions continue unabated. Variation in the average summer heat index would cause Illinois' climate to migrate south (USC, 2009). In most of the Midwest, average annual precipitation has increased by 5-10% over the last half-century (EPA, 2016). In the future, seasonal precipitation is expected to increase the most. This would cause the greatest risk of flooding during the winter and spring in Illinois (Changnon et al., 2004). On the contrary, the Midwest is projected to receive less rain in the summer. Hence, Illinois may get more rain in spring and less in summer. The heat and precipitation changes projected for Illinois have profound consequences for agricultural production.

This study is subdivided into two main phases. In the first phase two general circulation models (GCMs): CCSM4 and MIROC5 were selected for being robust and welldepth for the tile drain was determined based on crop yield and daily drain flows generated by the model.

established based on the overall recommendation of climate

scientists. These GCMs have been used for several studies of regional climate change with acceptable performance for the

Midwest United States (Knutti et al., 2013; Wuebbles & Hay-

hoe, 2004). The GCMs were validated by comparing the re-

semblance between model-simulated and observed meteoro-

logical patterns for the baseline period from 1980 to 2010.

Taylor diagrams were used to make an analogy between the

observed and simulated temperature

for each GCM while precipitation

was evaluated using the double

mass curve and monthly climate

normals. Next, the climatological

database was created by downscal-

ing the projections of MIROC5- the

GCM that showed better perfor-

mance. In the second phase, the

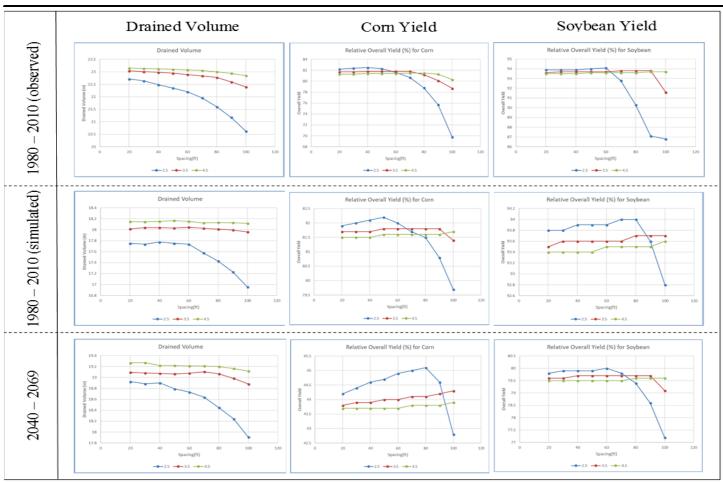

hydrology model was developed to simulate the performance of subsur-

face drainage systems for a range of

depth and spacing. The optimal

This article presents results for Champaign county for its dominant soil type, Drummer silty clay loam. From the model, two output variables: drained volume and crop yield (for corn and soybean) were analyzed for two 30-year time periods: historic period (1980-2010) and the near future (2040-2069). Drain spacing from 20 ft to 100 ft at an interval of 10 ft and drain depth from 2.5 ft to 4.5 ft at an interval of 1 ft was specified for the simulation.

Results indicate that the simulated drained volume for the baseline period was moderately underestimated by the MI-ROC5 GCM but showed a similar trend for tile depth and spacing. The yield for both corn and soybean was better approximated by the model with comparable values. The drainage volume showed a small deviation from the baseline period, increasing slightly in the near-future. This may be due to the variability of precipitation in the future. Corn yield in the nearfuture reduced to almost half of the present

Model simulations for Champaign County

yield. Results are consistent with previous studies (Melillo et al., 2014) that state corn yields fail at high temperatures (above 95 °F). Potential future adaptations to climate change for corn yields would require an increased tolerance to maximum temperatures or a change in the variety of crops grown. The yield for soybean was affected less than corn. Soybean yield showed a gradual decline over the years. Soybean benefits more than corn from CO2 fertilization (USC, 2009), which explains the slower rate of decrease. During both historic and future time periods, the tile depth of 2.5 ft had the lowest drained volume and corresponded with the highest yield for both corn and soybean. Results were inconclusive for an optimal spacing as there was a large variation based on location, time-period, and the model variable considered. This analysis concludes that validated hydrological simulation models can be successfully used to understand the consequences of environmental effects on crop physiological processes under scenarios of climate change.

Registration fee deadlines will be strictly enforced. **Refund Policy:** For cancellations received prior to June 29, 2018 a \$30.00 charge will be deducted from the original amount paid. No registration payment will be refunded after June 29, 2018 unless there has been an emergency.

AREA 6 GOLF OUTING: WET, HOT, FUN

The 7th Annual Area 6 Golf Outing was another great success this year! Sponsoring the outing was Altorfer, Inc.; Springfield Plastics, Inc.; Birkey's and Fratco along with over 30 different hole sponsors, meal and beverage sponsors.

Approximately 65 golfers came out for this year's event at the beautiful Meadowview Golf Course in Mattoon, IL. This year's weather was not quite as perfect as last year's with high humidity, temps reaching the upper 80s, and a pop-up thunderstorm resulting in an hour rain delay. However, golfers still had a great time competing for prizes and fundraising along the way with 50/50 raffle contributions and "donate-to-spin" contributions at the Purple Wave Auction sponsored "wheel of fortune" hole. Meadowview GC staff served delicious lunch and dinner menus, sponsored by Prins Insurance/United Fire Group & Port Industries, Inc., respectively. Staff also did a great job of keeping golfers well hydrated in the clubhouse and on the course with beverage sponsorship from Grey & Associates - Safety Provider.

While the heat, rain delay, and longer event day impacted some golfers' scores, there were still a number of standouts including:

Longest Drive:	Ryan Coffey		
Closest to the Pin:	Darin Patrick		
Longest Putt:	KC "Shooter" Rhodes		
Lowest Scoring Tea	m: Chris Summers, Austin Powley, Ryan Hart, Tyson Harris		
Most Honest Team:	Brian Hays, Don Webster, Tim Hays, Kenny Williams		

Our sincere thanks to everyone who supported the outing including sponsors, donors, volunteers, and golfers. A big thanks for our Golf Outing Committee, as well, for putting the successful event altogether. This fundraiser helps ILICA grow membership, supports our events and activities, and provides social networking within a fun and competitive atmosphere. ILICA events would not be as successful as they are without the hard work and generosity of all those involved. So if you have a chance to thank any of these supporters, please let them know that YOU appreciate their efforts as well!

For the complete listing of sponsors, check our website:

ASSOCIATE MEMBER CELEBRATES 50 YEARS

Port Industries traces it roots back to Mercer County, Ohio before 1900 when Harvey Shimp was laying clay field tile. His son Nathan Shimp, helped Harvey through his years growing up while he was in school, and then also after he returned from WWII. In 1950 Nathan wanted a better ditching machine than the 1911 model he was running, so he designed a new machine. He hired a local welding shop to build it for him and others quickly wanted one of the new Tandem Traction Trenches. In the early 1960's Nathan sold his interest in this venture to Karl and Mark Speicher. He then incorporated Port Industries, and in 1967 Port Industries completed its first machine. This was an auger backfiller, and it was followed by the Hydra -Tandem Trencher in 1968.

The Hvdra-Tandem was the first completely hydrostatically driven trencher. All other ditchers being built at that time were driven with gear boxes and exposed drive chains. Nathan used the machines he built through Port Industries to build a successful drainage contracting business in

northeast Missouri and west central Illinois. He continued to build machines through the 70's and 80's, and if a machine wasn't sold, Nathan and the Port Industries employees would use it to install drain tile themselves until it did sell.

Port Industries introduced the Hydra-Tandem II in 1987. This was the first rubber fired trencher capable of digging 7 feet deep. In 1991 the Hydramaxx 2400 became the first 4-wheel drive trencher offered by Port Industries. By 2002 Port Industries product line included the Hydramaxx 2600 (rubber tire wheel trencher), Hydramaxx 3300 (self-contained plow). Because of this rapid expansion in 2000 Port Industries moved to its current location for increased production capabilities. In 2015 Port Industries added on again to include office space, and in 2016 added a new service building featuring three independent service bays.

This year Port Industries has introduced an Interchangeable V-Plow attachment, and the first self-contained full-size V-Plow manufactured in the USA, the Hydramaxx 3320 V-Plow. Hydramaxx equipment is used in a variety of markets including Ag, renewable energy, pipe line, and gas. The Hydramaxx brand can also be found from California down to Florida in the USA, and in Canada.

Today, 50 years after our first trencher, Port Industries is still growing and changing to keep up with technology, customer demand, and service. Port Industries now also, specializes in setting up machinery, from back-fillers to tractors, with Trimble products for machine control for steering and elevation control offering both laser and GPS.

On July 27, 2018 Port Industries will be hosting a field day to celebrate our 50th Anniversary and to showcase our newest models of trenchers and plows.

SAFETY FEATURE: PREVENTING HEAT-RELATED ILLNESS

Summer heat can be more than uncomfortable; it can be a threat to your health. Unfortunately, you do not have much of a choice when it comes to job site. Follow these tips to stay safe in the searing heat.

Heat Exhaustion

Heat exhaustion occurs when a person cannot sweat enough to cool the body—usually the result of not drinking enough fluids during hot weather. Symptoms include:

- Dizziness, weakness, nausea, headache and vomiting
- Blurry vision
- Body temperature rising to 101° F
- Sweaty skin
- Feeling hot and thirsty
- Difficulty speaking

A person suffering from heat exhaustion must move to a cool place and drink plenty of water to avoid a more severe heatrelated condition—heat stroke.

Heat Stroke

Heat stroke is the result of untreated heat exhaustion. Symptoms include:

- Sweating stops
- Unawareness of thirst and heat
- Body temperature rising rapidly to above 101° F
- Confusion or delirium
- Possible loss of consciousness or seizure

Heat stroke is a serious medical emergency that must be treated quickly by a trained professional. Until help arrives, cool the person down by placing ice on the neck, armpits and groin. If the person is awake and able to swallow, have them drink a small glass of water every 15 minutes or until help arrives.

Tips for Staying Cool

The combination of heat and humidity in the summer months can be downright uncomfortable and even dangerous. Stay cool by following these safety tips:

- Drink plenty of water—enough water to quench your thirst. The average adult needs eight 8-ounce glasses of water a day, and even more during hot weather.
- Skip the caffeine and soda; drink water instead.
- Dress for the weather. When outside, wear lightweight clothing of natural fabric and a well-ventilated hat.
- Eat light. Replace heavy or hot meals with lighter, refreshing foods. And always eat smaller meals before work or intense activity.
