PRESIDENT'S MESSAGE

Hello from southern Illinois, many of us are dodging showers and storms. Since our last newsletter we continue to meet with Illinois Com Growers and Wetlands Initiative representatives about possible construction and demonstration projects. The latest on the Wetland project is that the soil profile in the location of the wet-

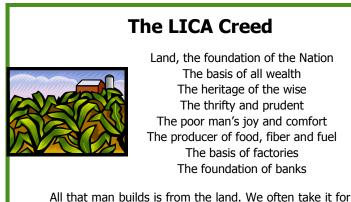

land is already wet subsurface. This will require a little different approach to construction than the last project. The ILICA show committee chair and his team are ready for the challenge and if this project can be completed we will get it done. Investigations and proposals for the Corn Growers have been prepared on three possible farms and have been presented for their consideration. At the May Regular meeting the board agreed to continue discussions with Illinois Farm Bureau's Lauren Lurkins about possible demonstration projects during 2017. Ryan and I have attended several NLRS benchmarking committee meetings. Everyone is seeking data about BMPs to reduce the Nutrient losses. The new ILICA Directory is now out, take a look and now would be a good time for me to Thank all of the Associates for supporting ILICA. Thank You to all the advertisers.

Bill Dean is planning a great Golf Outing June 24th and the Summer Picnic June 25th. Come join in some fun and the summer annual meeting at which we plan to vote on some bylaws changes. All of this information is available on the ILICA webpage.

National Summer Annual meeting agenda and venue have been announced. Kansas City area tours of interest, a full day of education sessions and the Board meeting.

The education committee and Ryan have been working on the August Drainage workshop. They have a proposed, three day agenda including tile drainage design & updates, edge of field BMPs, certification review & testing, and updates and developments in the technology available for use in construction. The Drainage workshop is scheduled for the first week of August.

Tom Beyers, President

All that man builds is from the land. We often take it for granted or even abuse it; And yet many, unthinkingly and unknowingly pass the land by. What man does with the land will be the deciding factor of his survival.

DES MOINES WATER WORKS CASE DELAYED

Many have been keeping a close eye on a lawsuit in Iowa that was filed in March of 2015 involving 10 drainage districts that are being sued by the Des Moines Water Works (DMWW) for nutrient runoff. This suit could have far reaching effects to farmers throughout the United States. Des Moines Water Works is pointing the finger at drainage tile and drainage ditches and accuses them of being "point sources which transport a high concentration of nitrates contained in groundwater." The trial was originally slated to begin on August 8, 2016 but was rescheduled last month by the U.S. District Court for the Northern District of Iowa in Sioux City. The court has now given both parties until June 21, 2017 to reach a settlement or the case will go to trial on June 26, 2017. Bill Stowe, DMWW CEO and General Manager since August of 2012, has been asked repeatedly what it would take for DMWW to drop their lawsuit against the districts. In response, Stowe stated "We believe permitting the drainage districts is the clearest line to reducing pollutants in the Des Moines and Raccoon rivers." However, Stowe has also admitted during deposition that because discharges from farm tiles are exempt from federal law, the drainage districts do not have the ability to require a permit

Precision Intakes Full Line of Surface Water Intakes

- 8" & 10" riser with patented 8" & 10" combination Tees. Also 6" square & round risers with patented reducing Tee.
- Constructed of heavy-weight, high-density polyethlene.
- Parts highly adjustable & interchangeable with others on the market.
- Orifice plate placed at tee level or at ground level.
- Exclusive locking device on each part.
- User Friendly-Priced effectively.
- · Adaptor available to repair old metal or broken intakes.

from farmers and others who discharge into the district. John Torbert, Executive Director of the Iowa

Drainage District Association equated the lawsuit to "suing the

highway because cars travel the highway and cause pollution." This is a great analogy because the drainage districts not the ones putting the water in the ditches, they are simply a way for the water to move from the area.

The Iowa Drainage Districts sought a motion for summary judgement and in that motion stated "DMWW asks this court to ignore drainage districts' lack of ability to do anything DMWW requests, ignore congressional intent, overturn more than 40 years of consistent interpretation by the agencies responsible for administering the relevant statutes that Congress never overturned, and impose permitting requirements for drainage districts." The districts also pointed out that "Congress chose to place the burden to clean river water on drinking water utilities wishing to use river water, not those who convey nitrate to rivers." Iowa does have a Nutrient Reduction Strategy that has been in place for longer than the Illinois Nutrient Loss Reduction Strategy.

In addition to the far reaching effects that this lawsuit can potentially have, it also places a significant financial burden on the Iowa districts in the form of legal fees. Reportedly, the counties have raised \$100,000 to pay local attorneys and there are three other entities that are raising funds. One is a fund established by the Iowa Drainage District Association that had raised \$153,250 with approximately \$63,250 coming from the private sector. There are also funds established in Sac County and Des Moines for local donations. Joel Brinkmeyer, the CEO of the Agribusiness Association of Iowa stated "It's a very expensive lawsuit for agriculture, not just the dollars, but the time and resources that agriculture is spending to defend their position." The lawsuit is costly for DMWW as well. They reportedly spent \$550,000 and the case has not even gone to trial. The IADD will keep a close watch on this lawsuit since it will likely have far reaching effects.

1. Learning About Fruit Flavors in Wine

To discover the fruit flavors in your wine, you've got to know what the fruit tastes like. And unless you live in a place I've never heard of, you're just not going to have all the fresh fruits available that are often nuanced in wine. Solution? Jam. Seriously: Go to your supermarket and get some jams. Blackcurrant, plum, black cherry, strawberry and apricot are probably good ones to start with. I even found most of these at my

local dollar store, so they only cost me a buck! And it really helps as you learn to taste the different flavors in wine. It'll be handy at breakfast, too.

2. Economical Sipping

I totally get it. You like wine, but even those \$8.00 bottles seem a bit much on the wallet sometimes. Well, this might be an obvious suggestion, but I've been amazed at the number of people who've never considered this before:

Have you checked out the prices on the big ol' 1.5 liter bottles at your wine store? (They're called a "Magnum") Often, you can find great deals on these, which are twice the amount of a regular bottle of wine and often go for \$10.00-\$12.00 or so. Some of my favorite red wines can be found at a better price in the Magnum bottles since more and more companies are producing this option. If you store it well, it can keep for several days and keep you and your guests sippin' in style!

Also, try the wine sales rack at the store–you can sometimes score some good deals and it will give you an opportunity to try a wine that you might not otherwise be able to afford. Or shop online if your state allows shipping.

Finally, if you are having a party and want some tasty wine but can't afford the cost, check out the box wine section of your store. Yep, you heard me. Just like the Magnum bottles, more and more companies are producing some tasty stuff in boxes. Now, don't just buy any box wine–some of them really are not so great. But lots of newer versions are coming out with some pretty good vino and you might be able to score something you enjoy in a 750 ml bottle for a fraction of the price. In fact, I received a recommendation for "Black Box" box wine from a very nice antiwinesnob reader just recently. I have not tried it yet, but I'll be sure to post a review when I do. If you try it, let me know what you think, okay? Just send it to jesse@antiwinesnob.com

If you do decide to buy boxed wine and are concerned about presentation, just empty the wine into some glass decanters or carafes for self-service. I bet your guests won't know the difference.

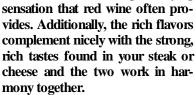

CAVEAT: IN AN EFFORT TO BE AS NON-SNOBBY AND OPEN MINDED AS POSSIBLE ABOUT BARGAIN WINE, IVE ACTUALLY TRIED SOME OF THE WINE FROM THOSE BIG JUGS WITH SCREW CAPS THAT ARE OFTEN LOCATED AT THE BOTTOM RACK OF YOUR LIQUOR STORE. THERE MAY BE AN EXCEPTION THAT IM NOT AWARE OF, BUT, GENERALLY SPEAKING, UNLESS YOU WANT AN UNPLEASANT EXPERIENCE FOLLOWED BY A SOUR STOMACH, STAY AWAY FROM THESE! 3. Red or White Wine With Dinner?

So, you're having a dinner party and you don't know what kind of wine to serve with your main course.

Well the truth is, nowadays, you can serve whatever type of wine you like with whatever your course may be. The old adage of Red Wine with Red Meats, White Wine with White Meats is a bit passé in today's society. Still, clichés exist for a reason, and the reason (in very basic terms), is this:

Red Wine: Because of the richer tannins and rolling flavors found in red wine, the flavor and feel of le vin rouge tends to be more overpowering. When eaten with other rich flavors such as a creamy cheddar cheese or a juicy steak, the

> tannins in the wine actually bind to the proteins in your food, thereby leaving your tongue less susceptible to the astringent, drying

White Wine: White wine tends to be crisper, lighter, higher in acidity but much lower in tannins (if any). Because of this, white wine tends to go nicely with milder dishes such as poached seafood or

raw oysters. The crisp, light flavors do not overpower the subtle flavors of the food and provide a pleasant, refreshing accompaniment with them.

So which to choose? Really, any you like. While the above paragraphs demonstrate the reason behind the adage, there is no reason why you can't try a rich, red wine with raw oysters or a crisp Chardonnay with you veal parmesan. In fact, I enjoy matching apparent opposites such as this. The flavors and contrasts are fun to experiment with.

Plus, if you're like me, sometimes you just prefer a red over a white (or vice versa), no matter what you're eating.

Bottom line? Red or White is really up to you and it is an acceptable practice in our modern age to drink whichever with whatever foods. In my experience, the folks that speak condescendingly about "You're supposed to drink red wine with that...." usually don't know much about wine in the first place and are just spouting out what they've heard from everyone else.

So enjoy. And hey, at the bargain wine prices found in my reviews, you can try one of each!

4. Removing Wine Stains

Employ these tactics at your own risk.

So, you've had a few friends over and you're all sitting around the coffee table, having a good time. Someone gets up for another hit of your fabulous fondue and accidentally kicks the bottle of red wine that you put on the floor. Before you know it, it looks as though a homicide has been committed on your white rug and you're dashing with ninja-like reflexes for the nearest towel.

Wine Tips & Tricks

What to do? Windex.

I'm serious. This stuff is amazing. After dabbing up the wine as quickly as possible, spray Windex all over the stain and dab again with a clean towel (don't use anything where the colors in the towel might rub off). Do all of this as quickly as possible and repeat. Chances are, you can minimize the stain or even make it disappear.

 $V \, \alpha la! \, \mbox{Red stain is banished. Plus, you might have impressed your friends a little.}$

Two other home remedies I've heard of are Oxiclean or salt and water. I've not tried either of these, but I have used Oxiclean for other stains and have been pleased with its performance. If you experiment with the salt-and-water remedy, make sure you use room temperature water as hot water can set the proteins in the stain and make it very difficult to remove. Let me know how it turns out, too. (jesse@antiwinesnob.com)

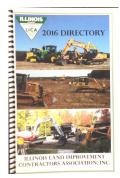

5. More Clever Clues to Come Keep checking with antiwinesnob!

Didn't receive a Directory? Listing incorrect? We want to hear about it!

The 2016 ILICA Directory just went out last

month. Now is a great time to sit down with the publication to review your listing for accuracy and check out our Associate listings. If you find an error in your listing or did not receive your Directory yet, be sure to give us a call in the office so we can update

our records or get you another copy mailed out.

ILLINOIS'S NUTRIENT LOSS REDUCTION STRATEGY (NLRS) DRIVES WORKING GROUPS, ILICA INVOLVEMENT

Improving our water resources with collaboration and innovation

Finalized in July 2015, Illinois's Nutrient Loss Reduction Strategy is now in the process of implementation. With interim nutrient reduction goals of 15% nitrogen and 25% phosphorus by 2025, the NLRS sets the bar for an eventual goal of 45% reduction of N and P loading for the state over time. Such an undertaking will require unique collaboration, cooperation, and implementation of nutrient reduction practices and management activities from all contributing areas of the state- urban, agricultural, and industrial.

Agriculture is labeled as the primary contributor of nonpoint source nitrate losses in the state, while industry ties agriculture for the top contributor title as it pertains to phosphorus. Thus, agriculture is receiving a lion's share of the education and implementation efforts that accompany the NLRS. With well over half a dozen various working groups, formed either within or out of the NLRS, there are numerous agencies, organizations, companies, and interest groups investing manpower, time, funds and other resources to help IL meet its goals; much of these groups' focus lies in farmer outreach, best management practice implementation, on-the-ground funding of projects, the provision of technical assistance, and the showcasing of these efforts.

ILICA realizes we play a critical role during these chang-

ing times, and we are doing our part to help IL reach our nutrient loss reduction goals in many ways. ILI-CA sits on many of these NLRS

working groups including the AWQPF, Alphabet Soup, NRCS State Tech Committee and NRCS NLRS sub-committee to name a few. We are involved with many partners and projects that directly impact NLRS goals such as IL Corn, The Wetlands Initiative, Farm Bureau and others. And we are on the front lines working with producers on a daily basis to address a variety of resource concerns and goals; many of these focused on or designed around water quality.

While the NLRS is new to everyone and while some uncertainty exists surrounding how IL will achieve its nutrient reduction goals with no new NLRS funding nor State budget (at time of print), ILICA is poised to be a significant leader in this effort. We have the experience to guide new practice design and installation; we have the opportunity to diversify and expand our Association's expertise to other forms of management and practice implementation; and we have the responsibility of directly educating our customers on new practices and products that will collectively help us all in Illinois improve water quality and meet our goals.

ILICA Associate Members

With all the potential building projects on ILICA's horizon, it only seems fair to keep our very generous associate members in the know.

The most immediate opportunities will be the Wetland Project in Bureau Co. the 4th week in August and even though a specific site has not been selected, the Illinois Corn Growers field lab project will most likely be in the Champaign/Urbana area. The committee is hoping to get things determined in time for late summer as well.

With multiple opportunities for equipment and/or material donations on these projects, the ILICA Leadership wants to assure our associate membership that they <u>DO NOT</u> expect everyone to donate at every opportunity.

If you are interested in participating in one or both of these building projects or would like more detail about the construction itself, please contact Ryan at the ILICA office at (309) 446-3700 or via email at Ryan@illica.net.

EXCELLENCE BY EXPERIENCE

A Procedure for Thinning and Extracting Elevation Data from LiDAR Maps

In the previous issue of the LICA newsletter a comparison of contour maps derived from LiDAR data and from field surveys was presented. Subsequently, contractors have expressed interest in obtaining elevation data from contour maps. Such a procedure is presented in his article. The procedure may also be accessed online at http://www.wq.illinois.edu/dg/Extraction/LiDAR_Extraction_Procedure.htm

The online version includes videos of each step of the procedure.

The procedure is designed for QGIS (<u>http://qgis.org/en/site/</u>), a public-domain GIS that is free, easy to use, and available for Windows, Mac, and Android computers. It also has the ability to convert maps between coordinate reference systems on the fly. Thus a map created in latitude/longitude coordinates can readily be displayed in State Plane coordinates. Other GIS programs can be used, if one is more familiar with those.

<u>Create Boundary File</u>. Use the polygon tool in Google Earth to create an outline of the field, and save it as a .kml file. The Google Earth default is to save it as a .kmz file, but this type of file cannot be opened in the GIS program. Field outlines obtained from other sources can also be used.

Load and Convert Boundary File. Open QGIS and load the .kml file. (Layer ->Add Layer ->Add Vector Layer) Save it as a shape file in Illinois State Plane East or Illinois State Plane West coordinate reference system (CRS), depending on the county in which the field is located (Figure 2). If this is the first time that a particular CRS is being specified on your computer, it will not be listed in the drop down box. In this instance it can be selected by clicking on the globe icon to the right of the dropdown box (Figure 3) and typing the name of the CRS. Set the project CRS to that of the shape file.

A Procedure for Thinning and Extracting Elevation Data from LiDAR Maps (cont.)

Load County LiDAR File. Load the county LiDAR file. *(Layer ->Add Layer - >Add Raster Layer*) It is important that the field boundary be loaded before loading the county LiDAR file. County files are quite large and if they are loaded first, the entire file is loaded, and that takes quite a bit of time. If the field boundary is loaded first, and the screen zoomed to the field level, only the portion of the county file that will show up on the screen is loaded, saving time. County LiDAR files can be downloaded from the Illinois Geospatial Data Clearinghouse.

(https://clearinghouse.isgs.illinois.edu/data/elevation/illinois-heightmodernization-ilhmp-lidar-data) The required files are in the Digital Terrain Model (DTM) subdirectory in the Derivatives folder. Thus, only the **Derivates** folder needs to be downloaded and expanded

Extract a Section of the County LiDAR File. Save the county LiDAR data to a file that is limited to the extent of the screen. This step produces a LiDAR file that is much easier to manipulate than the county file. The data is at the same resolution as the county file.

<u>Clip LiDAR file to Field Boundary</u>. Clip the file produced in Step 4 to the boundary of the field. *(Raster->Extraction ->Clipper)* The resolution can be changed at this stage.

<u>Convert to xyz Format</u>. Convert the LiDAR file to xyz format. *(Raster ->Conversion ->Translate*). A rectangular region is produced, with the elevation of points outside boundary being set to an extremely high negative number. In the next step, these external points are removed.

Figure 2. Illinois State Plane Zones

- <u>Clean and Label xyz File.</u> Unload the xyz file from QGIS. Open it in Excel, convert text to columns, sort the rows and remove external points. This step produces xyz points for the field, similar to those produced from a field survey.
- Load xyz file to QGIS. The xyz file can be reloaded into QGIS and processed in a similar manner to regular survey. . (Layer ->Add Layer ->Add Delimited Text Layer)

I would like to thank **Mark Baker** from **Springfield Plastics** for working through the procedure and suggesting improvements. His suggestions have been incorporated into this version of the procedure.

AREA 6 GOLF OUTING, ILICA SUMMER PICNIC & MEMBER MEETING ARE A BIG HIT!

The 5th Annual Area 6 Golf Outing was a huge suc-

the outing this year was Jim Hawk Truck Trailers, Inc.; Altorfer, Inc.; Port Industries, Inc.; Springfield Plastics, Inc. and Birkey's along with over 30

different hole sponsors. Fifty seven golfers enjoyed Meadowview Golf Course's beautiful links and

delicious lunch and dinner menu, sponsored by H & S Company, Inc. & Hickenbottom,

Inc., respectively. While the weather was "steamy" at times, it was perfect compared to the last couple of years' outings in Mattoon.

Our sincere thanks to everyone who supported the outing including sponsors, donors, volunteers, and golfers.

This fundraiser helps ILICA keep growing in membership and activities, and it's a great time to boot! There were only positive comments about the condition of the course, food &

beverages, and the camaraderie on-hand during the event. A few comments were a little less positive regarding the results of individual

play...but everyone still enjoyed the day!

Award winners for the day included: Longest Drive . Tyson Harris; Closest to the Pin - Steve Karolewicz; Longest Putt - Pat McCabe; Lowest Scoring Team - Grant Curtis, Mark Baker, Kyle Kucurek, Mark Shortz; Most Honest Team - Corky Hopper, Cy Hopper, Bob McCallister, Stan Uphoff.

ALTORFER Springfield Plastics. inc. IRKEY

JIM HAWK TRUCK TRAILERS INC

The following Saturday morning, Birkey's had several pieces cess with Mother Nature's cooperation this year! Sponsoring of Case equipment including skid loaders, backhoes, dozers, and a

> mini excavator set behind Bill up Dean's shop for display and a hands on Backhoe Rodeo. Evervone had ิล blast competing against each other

by operating the various pieces of equipment through timed obstacle courses. Jon Seevers took home the Rodeo Champ title, while John McCoy was close behind in second place and Brian Brooks in third. Bower's Great Lakes Inter-Drain, Inc. sponsored a delicious breakfast before the event grilled by

Bill Dean and Mid America Trenchers, LLC sponsored a grilled lunch before the member meeting.

Our heartfelt thanks go out to the Deans for their hard work and dedication to preparing and hosting this 2 day event. Thank you again to all our Area 6 golf outing sponsors at all levels and Birkey's for their generosity in providing the

equipment and manpower for the hands-on Backhoe Rodeo on Saturday morning. ILICA events would not be as success as they

are without the hard work and generosity of all those involved. So if you have a chance to thank any of these fine folks, please let them know that YOU appreciate their efforts as well!

> Thanks, too, to everyone who attended or supported these events in every way!

NLRS & End-of-Pipe Practices Overview • Drainage Design Considerations • Bioreactor & DWM Design • Dual Purpose Sub-Irrigation/Drainage Systems • Construction Do's & Don'ts

Design Tools (Google Earth, QGIS) • ILICA Certification • IL Drainage Guide

	Tuesday		Wednesday cont.
8:30 am	Registration & continental breakfast	2 pm	Break
9 – 10:00 am	Nutrient Loss Reduction Strategy (NLRS)	2:15 3:15 pm	Update on recent U of I research
10:00 – 11 am	Bioreactors		projects: field mapping w/drones
11 am – Noon	Saturated buffers	3:15 5 pm	Installation of GIS & LiDAR data
Noon 1 2:30 pm	Lunch onsite Wetlands		Thursday
2:30 pm	Break	8 am	Full breakfast onsite
	Break :00 pm Construction "do's and don'ts"	8:30 – 9:30 am	Google Earth overview
5.00 4.00 pm	construction do's and don'ts	9:30 - 10:45 am	QGIS, LiDAR extraction
	Wednesday	10:45 am	Break
8 am	Full Breakfast onsite	11:00 - Noon	Sizing bioreactors, Drainage Guide
	Surveying basics, calculating slopes, sizing		update /overview
(Break included) the main, layout laterals, control zon		Noon	Lunch onsite
	and drain spacing for dual purpose systems, etc.	1 5 pm	ILICA certification review & testing
Noon	Lunch onsite	(Break included)	
12:45 - 2 pm	Initial considerations using field data as source material: soils, outlets, suitability for drainage water management		

This tentative agenda outlines the content of ILICA's Summer Drainage Workshop. The goal of the first day is to provide an update/overview of the IL Nutrient Loss Reduction Strategy (NLRS) and to highlight the end-ofpipe practices used to address its goals, including basic practice design considerations and on-going research. This first day will conclude with construction do's and don'ts.

Day two will include a full day of drainage design: surveying, soils, outlets, tile sizing, suitability for drainage water management, dual purpose drainage design, and other site considerations. The day will conclude with some U of I research project updates and data download preparations for day three.

The first half of the third day will include an overview of different design tools such as Google Earth, QGIS, and the IL Drainage Guide, as well as bioreactor sizing.

ILICA certification is set for Thursday at 1 pm for those contractors interested in becoming an ILICA certified contractor, for those needing retesting, or for those looking to add more classifications to their current certification. The registration form and contact information for the Sleep Inn is on the following page. Mention Illinois LICA to get our rate of \$82.99 + tax. Make your overnight room reservations before July 17th. The hotel is close and very convenient for getting to class at Richland.

Improving Illinois farmland for 50 years

In 1966, Advanced Drainage Systems was the first company to manufacture plastic agriculture pipe in the United States. Today ADS is proud to continue its support of the agriculture industry.

At ADS we have an unmatched production selection for the ag market:

- 3"-24" (75-600 mm) singlewall pipe & fittings
- 4"-60" (100-1500 mm) dual wall pipe & fittings
- Water Control Structure

For more on ADS products please contact:

By-Laws Amended at Member Meeting

By unanimous vote at the summer member meeting in Mattoon on June 25, 2016, the ILICA by-laws were amended as proposed and printed in the last newsletter. The amended by-laws essentially recognize the utilization of electronic media such as email, conference calls, and skype for conducting ILICA business and meetings.

2016 Summer Meeting Tentative Agenda

Celebrating LICA

Tuesday, July 19

8:00 am - 5:30 pm	Big Brutus Tour
6:00 pm	Executive Committee

Wednesday, July 20

7:30 am - 5:00 pm Water, Water Everywhere Tour

Thursday, July 21

8:00 am - 8:45 am	LICA Benefits
9:00 am - 9:45 am	A Flood of Rules, Regulations, & Legislation
10:00 am - 10:45 am	Drones for Contractors
11:00 am - 11:45 am	Why OSHA Is Up In the Air Over Your Forklift
1:00 pm - 1:45 pm	Watch the "Fine Print" When Buying Insurance
1:30 pm - 4:30 pm	Culinary Scavenger Hunt & Adventure Tour
2:00 pm - 3:30 pm	Protecting Your Assets
7:00 pm - 10:00 pm	Sports Theme Associates' Night

Friday, July 22

7:00 am - 7:30 am	Devotions
7:00 am - 7:30 am	Committee Chairs
7:30 am	Opening Breakfast
	Committee Meetings
8:45 am - 9:45 am	Education/Tech Legislative Water Table Mgmt Executive Directors
10:00 am - 11:00 am	By- Laws Conservation, Exc. Ladies & Devotions Executive Directors (cont.)
11:15 am - 12:15 pm	Convention Long-Term/Past Pres. On-Site Waste Safety/Insurance
12:30 pm	Lunch
2:00 pm - 3:00 pm	Membership Policy Associates
3:15 pm - 4:15 pm	Region Meetings
4:30 pm - 5:30 pm	Budget
7:15 pm	Royals Game (Game Starts at 7:15 pm)

Saturday, July 23

7:00 am - 7:30 am	Devotions
8:00 am	Breakfast
9:15 am - 10:30 am	Board Meeting
11:30 am	Lunch
1:00 pm - 7:30 pm	LICA Anniversary Celebration at Foley Equipment

Registration Policy: Only individuals registered and wearing badges may attend Summer Meeting events. No registration will be processed without payment. Registration fee deadlines will be strictly enforced. **Refund Policy:** For cancellations received prior to July 8, 2016 a \$30.00 charge will be deducted from the original amount paid. No registration payment will be refunded after July 8, 2016 unless there has been an emergency.

WORKING IN THE SUMMER HEAT

Heat-related illnesses can be deadly. Thousands become sick every year and many die due to preventable heat-related illnesses. With summer temperatures rising, now is the best time to prepare for working outdoors in

excessive heat by following a few simple steps

HEAT-RELATED ILLNESS: KNOW THE SIGNS

It's important to know the signs of heat-related illness—acting quickly can prevent more serious medical conditions and may even save lives.

Heat Stroke is the most serious heat-related illness and requires immediate medical attention. Symptoms include: confusion, fainting, seizures, very high body temperature and hot, dry skin or profuse sweating. CALL 911 if a coworker shows signs of heat stroke.

Heat Exhaustion is also a serious illness. Symptoms include: headache, nausea, dizziness, weakness, thirst and heavy sweating. Heat fatigue, and heat rash are less serious, but they are still signs of too much heat exposure.

If you or a coworker has symptoms of heat-related illness, tell your supervisor right away. If you can, move the person to a shaded area loosen his/ her clothing, give him/ her water (a little at a time), and cool him/ her down with ice packs or cool water.

TO PREVENT HEAT ILLNESS:

WATER.REST.SHADE.

Drink water every 15 minutes, even if you are not thirsty.

Rest in the shade to cool down.

Wear a hat and light-colored dothing

Learn the signs of heat illness and what to do in an emergency.

Keep an eye on fellow workers.

Acdimate – "easy does it" on your first days of work; be sure to get used to the heat and allow yourself to build up a tolerance. Not being used to the heat is a big problem. Many of the people who died from heat stress were either new to working in the

heat or returning from a break. If a worker has not worked in hot weather for a week or more, their body needs time to adjust.

This is OSHA's fourth year implementing its Heat-Illness Prevention Campaign. More resources are available on OSHA's website in English and Spanish and even an app to download to

your phone to calculate the heat index and provide recommendations based on your risk level. Check out www.osha.gov/ heat for training and other educational resources.

If you have questions, call OSHA. It's confidential. Call 1-800-321-OSHA (6742) or visit www.osha.gov to learn more about your rights and staying healthy in the workplace.
